

## KURSPLAN

# Research Track: Industrial Placement in Supply Chain Operations Management, 7,5 högskolepoäng

*Research Track: Industrial Placement in Supply Chain Operations Management, 7.5 credits*

---

Kurskod:	TRTS22	Utbildningsnivå:	Avancerad nivå
Fastställd av:	VD 2022-03-01	Utbildningsområde:	Tekniska området
Gäller fr.o.m.:	2022-08-01	Ämnesgrupp:	IE1
Version:	1	Fördjupning:	A1F
		Huvudområde:	Produktionssystem

---

### Lärandemål

After a successful course, the student shall

#### Kunskap och förståelse

- show familiarity with industrial work in an industrial setting
- display knowledge of certain areas related to supply chain operations management

#### Färdighet och förmåga

- demonstrate skills of scientific methods and approaches when planning and conducting project tasks or a study within predetermined time frames
- demonstrate the ability to describe, analyse and reflect on the results of the industrial placement
- demonstrate the ability in speech and writing to present results and discuss conclusions in dialogue with different audiences

#### Värderingsförmåga och förhållningssätt

- demonstrate an understanding of the complexity of collecting data in an industrial setting, adhering to scientific and ethical issues
- demonstrate an understanding of the role social, environmental and economic sustainability plays in an industrial setting and also demonstrate awareness of the interplay between efficiency requirements and need for renewal in this setting

### Innehåll

This course is preparatory for a future research career focusing on collaborative research projects. It builds on previous knowledge in research methodology and prepares the student for final project work. Its purpose is to give the student experience from both an industrial placement and from an academic research project. Thereby, the student will gain experience in how to understand industrial settings and how to design research studies for the collection of empirical data that can be analysed, discussed and presented as research results from

collaborative research.

Assignments within the course are dependent on the purpose of the individual research project that the student joins, the conditions at the industrial placement(s) and the student's own interests. It includes joining and contributing knowledge to an ongoing project, participating in professional practice relevant to the main subject area, planning for and delivering written and oral reflections upon the experience of professional practice.

The course includes the following elements:

- Industrial placement
- Research project placement
- Data collection
- Written and oral reflections

### Undervisningsformer

The students work individually but in close collaboration with other members of the research project. Each student may follow different plans, but everyone will have to participate in a common introduction on campus and/or via the learning platform; common reflection sessions; and a final presentation on campus.

Undervisningen bedrivs på engelska.

### Förkunskapskrav

Passed courses of at least 90 credits within the major subject industrial engineering and management, mechanical engineering, civil engineering, computer engineering (or the equivalent), and 15 credits in mathematics. At least 30 credits in the master's programme (or the equivalent) should be approved, including a course in research methodology. Proof of English proficiency is required.

### Examination och betyg

Kursen bedöms med betygen 5, 4, 3 eller Underkänd.

The final grade for the course is based on a balanced set of assessments. The final grade will only be issued after satisfactory completion of all assessments.

Poängregistrering av examinationen för kursen sker enligt följande system:

Examinationsmoment	Omfattning	Betyg
Inlämningsuppgifter	6 hp	5/4/3/U
Skriftlig och muntlig presentation	1,5 hp	5/4/3/U

### Övrigt

The course is an elective course for the master's programme in Supply Chain Operations Management. The industrial placement is done within the frame of a research project at the School of Engineering or other related institutions. Should more students than there are available industrial placements elect the course, it is up to the examiner to distribute the places.

This is done based on a combined assessment of the students' progress during the first year of studies and fit with the specific topic of the project.

### **Kurslitteratur**

Course literature and other suitable teaching aids are decided upon for each individual project depending on its focus area within the main field of study.
