

## **COURSE SYLLABUS**

# Linear Algebra and Optimization, 9 credits

Linjär algebra och optimering, 9 högskolepoäng

Course Code: TAOG17

Confirmed by: Dean < MISSING VALUE>

Valid From: Jan 1, 2017

Version:

**Reg number:** JTH 2016/2672-313

**Education Cycle:** First-cycle level Disciplinary

domain:

Natural sciences

Subject group: MA1 Specialised in:

G1N

#### Intended Learning Outcomes (ILO)

After a successful course, the student shall

Knowledge and understanding

- display knowledge of vectors and matrices and the basic operations, defined for these objects
- display knowledge of systems of simultaneous linear equations, their possible sets of solution, and how they can be formulated as matrix equations
- display knowledge of what constitutes a linear programming problem

#### Skills and abilities

- demonstrate the ability to use Gauss elimination and basic matrix algebra to solve systems of linear equations
- demonstrate the ability to use vector operations to solve geometrical problems in two or three dimensions
- demonstrate the ability to calculate determinants and use them to draw conclusions on the solution set of a a system of simultaneous linear equations, matrix singularity or linear dependency of vectors
- demonstrate the ability to mathematically formulate a real world problem as a linear programming problem
- demonstrate the ability to use graphs and the Simplex algorithm to solve limited-sized linear programming problems and to draw sensitivity conclusions from the solutions
- demonstrate the ability to formulate the dual of a linear programming problem and to draw conclusions from its solution
- demonstrate the ability to use computer software to solve optimization problems

### **Contents**

The course introduces several elements from the linear algebra as well as techniques for linear optimization.

The course includes the following elements:

- Systems of simultaneous linear equations and Gauss elimination

- Vectors including the basic operations and some vector geometry
- Matrices and matrix algebra
- Eigenvectors and eigenvalues
- Linear programming
- Graphical solutions to two-dimensional linear programming problems
- The simplex method and sensitivity analysis
- Duality in linear programming
- Examples of computer software for optimization

## Type of instruction

Lectures, seminars and computer exercises.

The teaching is conducted in English.

## **Prerequisites**

General entry requirements and Physics I, Chemistry I, Matematics 3c or Physics A, Chemistry A, Matematics D and English 6 or English B in the Swedish upper secondary school system or international equivalent (or the equivalent).

## **Examination and grades**

The course is graded 5,4,3 or Fail.

## Registration of examination:

Name of the Test	Value	Grading
Written examination <sup>I</sup>	8 credits	5/4/3/U
Laboratory Work	1 credit	U/G

<sup>&</sup>lt;sup>1</sup> Determines the final grade of the course, which is issued only when all course units have been passed.

#### **Course literature**

The literature list for the course will be provided one month before the course starts.

Hardy: Linear algebra for engineers and scientists using Matlab, Pearson, ISBN 0-13-010988-6
